Data Management Solutions

Take Control of Your Data

Profit from our experience:

Airbus Defense and Space has over two decades of experience providing solutions. Management Solutions (DMS) are available as either hosted (cloud-based) or on-premises, manage, and disseminate all types of geospatial data. Everything from storage and

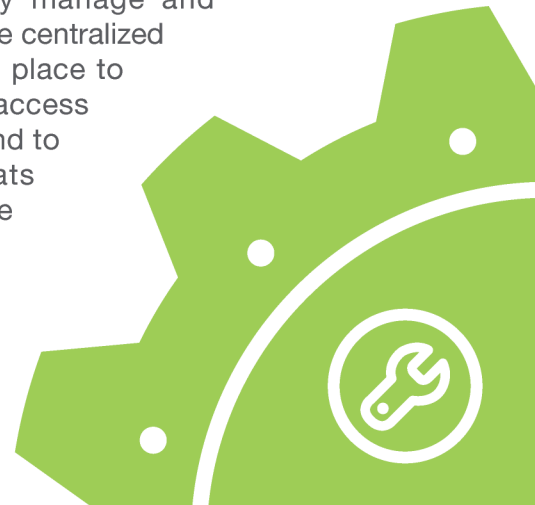

Data Management Portals

Manage data with ease and confidence.

Airbus DS Data Management Portals are a trusted turnkey solution for data management, providing you with secure single-point access to all of your data and are customizable for ease of integration into existing workflows.

DataDoors Portals: A software as a service (SaaS) solution which includes a map-centric interface that allows organizations to efficiently manage and process vast archives of imagery, LiDAR, terrain and map data in one centralized location. DataDoors Portals provide your business with a secure place to store your data while maintaining full control over individual access rights. The solution allows you to easily collaborate on projects and to process, download, and deliver geospatial data in multiple formats to internal users as well as customers via a simple e-commerce functionality.

GetGeo Portals: Online interfaces built on our GetGeo framework architecture and provided as part of a fully customized solution. These custom portals, managed by our geospatial experts, enable users to easily store, supply, analyze, monitor and collaborate on their data.

Fully Customized Solutions

Empower your enterprise.

For large organizations, Airbus DS combines our own products and capabilities with other technologies to provide fully customized location intelligence solutions.

These solutions are engineered to customer-specific needs using components drawn from best-of-class proprietary and open source modules. They can be either hosted (cloud-based) or deployed (installed on premises) and include any combination of storage and delivery, data analytics, collaboration and monitoring/tracking.

Our interoperable and secure fully customized solutions facilitate communication and collaboration within a customer's community, employing optimum technology and processes while improving cost and efficiency savings, to ensure the best return on investment.

solutions that increase the overall efficiency and profitability of your business. Data deployed (installed on premises). These solutions offer an easy way to access, and delivery to analytics and asset tracking to system integration is provided.

Data Management Systems

Elevate your business.

Airbus DS Data Management Systems are software and hardware packages installed behind your own firewall, on premises at your facility, or in the field on a mobile device.

DataDoors: A DataDoors Portal installed at a customer's facility. Choose between a software installation or an appliance. Both options easily integrate into your infrastructure and leverage your network storage capabilities.

I4D (Intelligence for Decision): A powerful system including a data center and a 3D interface used for merging geospatial and temporal data and maintaining a common operational picture. I4D is essentially a front door for a range of services provided by Airbus DS, which are generally based on data fusion and the interpretation of imagery.

GATOR (Geospatial Appliance Targeted for Operational Response): An encapsulated and portable geospatial server for offline use in the field. It's a "grab and go" appliance that provides flexible access to streaming geospatial data in your chosen GIS environment without the need for an internet connection.

Streaming Services

Access data instantly.

Geospatial data delivered as a streaming service can be accessed anywhere, anytime, on any device with an internet connection for use as a basemap and/or the creation of derivative works. Airbus DS handles all the data processing, ingest, hosting and maintenance for you. Standard multi-protocol delivery (OGC WMS and WMTS, Esri SOAP and REST, and Google KML) and delivery of data in multiple projections enables you to utilize the data in multiple software products and online platforms. Data usage and service performance is continuously tracked and reports are provided on a regular basis.

Airbus DS streaming services can be utilized in two ways:

Managed Hosting & Streaming: Purchase or create data, then host it in the Airbus DS cloud and access it via a streaming service.

Streaming Subscription: Subscribe to access Airbus DS data via a streaming service on a monthly or yearly basis.

Data Management Solutions

Take Control of Your Data

Make Your Geospatial Data Work for You. To fully leverage your organization's significant investment in geospatial data, you need to access it instantly from anywhere at any time. Airbus Defense and Space makes this a reality with easy yet robust Data Management Solutions designed to let you focus on your core business.

Our solutions are trusted by multiple government and commercial organizations throughout the world. Use our knowledge and experience to utilize your data more efficiently and profit more from your investment.

Whether you need your data hosted in the cloud, stored onsite, integrated with other geospatial products, or streamed live, Airbus Defense and Space solutions are fully managed and backed by technology and expertise unmatched in the geospatial industry. We are your trusted partner in Data Management Solutions.
